

PRESS RELEASE – 26th March 2019

SpheronVR presents new SceneCenter[®] software with GIS technology support

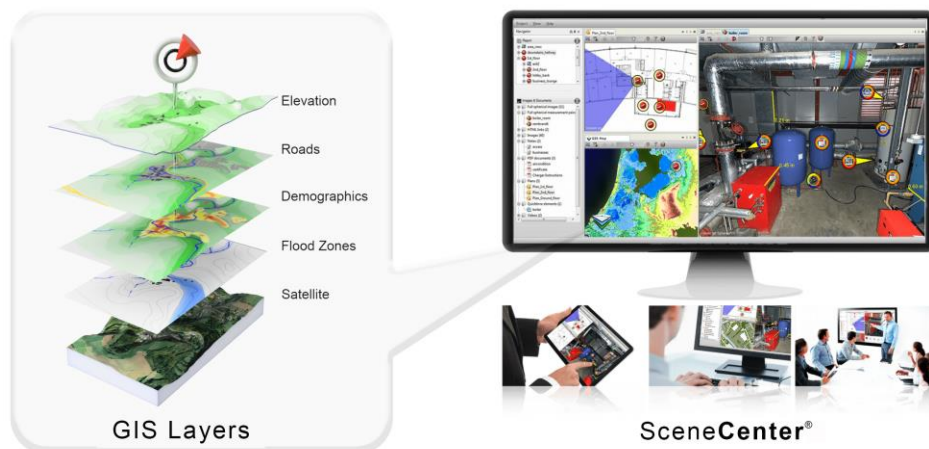

Spheron-VR AG, known globally as pioneers in HDR (High Dynamic Range) camera technology and experts in visual content management software, announces the forthcoming version of their SceneCenter[®] software.

This latest version 3.0 of the SceneCenter[®] software will include full support for GIS systems (geographic information service), hereby providing georeferenced positioning for all assets within SceneCenter[®] and the integration of customer-GIS-maps into projects.

SceneCenter[®] offers the production for virtual onsite scene documentation and provides tailored solutions for Governmental Applications such as Crime Scene documentation, Security, Critical Infrastructure Protection and also Industrial Applications such as Rail, Nuclear, Oil and Gas, Utilities and Construction.

Offering improved workflow efficiencies, multiple GIS data sources may now be integrated simultaneously – providing a comprehensive portal where the proven SceneCenter[®] technologies can be connected to many of the industry-leading GIS systems.

SceneCenter® documentation allows virtual access to a scene or a site from anywhere at any time. This offers a complete new approach to knowledge-aggregation and knowledge-sharing, such as from a crime scene through to court or from an onsite critical location through to the desk of analyzers or decision makers.

The forthcoming integration of GIS technology will now allow clients to connect spherical imagery to georeferenced data resources, take 3D photogrammetric measurement and interconnect both GIS and spherical imagery to all kinds of other digital asset information.

The version 3.0 of SceneCenter® with GIS integration will be made available on the SceneCenter's Server and Client application installations, as well as on Standalone version too.

To find out more information about SceneWorks® complete solutions, do get in touch directly via, email: info@spheron.com, tel : +49 (0)6333 2766-0 or via your local SpheronVR distributor.

SpheronVR is debuting this SceneCenter® v3.0 software this week at this year's RailTech Europe Expo held in Utrecht, Netherlands, 26-28 March 2019 (visit stand no 7.011).

About SPHERON-VR AG

SPHERON-VR AG is one of the most innovative companies in the area of visual information technologies. Core products of the German headquartered company are digital HDRi camera systems for full spherical photography as well as workflow-integrated image processing and database applications. Designed to fit the needs and requirements of many industry sectors, the companies major markets are Photorealistic Visualization & Computer Graphics (CGI) and database driven Visual Asset Management solutions in the areas of crime scene investigation, security, fire and tactical training. Comprehensive service offerings complete the professional portfolio. SPHERON-VR AG is based in Germany, where it develops, manufactures and delivers its technologies and solutions. Strategic partnerships and sales channels allow SPHERON-VR AG to offer their unique portfolio to a worldwide market.
